Accreditation standards and accreditation process for medical radiation practice

On behalf of the members of the Australian Diagnostic Imaging Association (ADIA), thank you for the opportunity to provide feedback on the *Draft medical radiation practice accreditation standard* ('the standard') and *Draft medical radiation practice accreditation process* ('the process') issued by the Medical Radiation Practice Board of Australia Accreditation Committee. I also thank you for providing an extension for this submission.

ADIA members are committed to providing quality diagnostic imaging services, which requires a highly skilled workforce. Accordingly, ADIA supports the development of the standards and the process which ensure that persons working in medical radiation are appropriately trained.

We would appreciate being kept up to date on further development of the standards and the process, and for any additional opportunities to engage with the Accreditation Committee as these documents are finalised.

ADIA represents private diagnostic imaging practices in Australia. Its members operate comprehensive practices providing services to patients in metropolitan, rural and regional Australia; are both for-profit and charitable and operate practices in the community and in public and private hospitals in Australia.

Please do not hesitate to contact me if you have any questions about this submission.

Yours sincerely,

Pattie Beerens
Chief Executive Officer
